From Network Availability to
OPERATIONAL EXCELLENCE

Leading Reliable Telecom Operations at Scale

People, Technology, Process, Resilience, Customer Impact.
That's the Real Network.

Engr. Obumneme A. Ikechebelu, FNSE, FNIEEE, R.Engr. (COREN), MBA, B.Eng. (EEE)
Telecom Network Operations & Transformation Leader
RAN | Core | Transmission | Fiber | Power | Infrastructure
Operations Excellence | Project & Program Delivery | People Leadership

CUSTOMERS First | **OPERATIONS** Always | **RELIABILITY** Everywhere | **PERFORMANCE** Measurable | **PEOPLE** Empowered | **INNOVATION** Continuous | **PARTNERSHIPS** Stronger | **A SUSTAINABLE TOMORROW**

My Journey, My Perspective

From electrical engineering and hands-on field operations to leading multi-region network operations and transformation, my journey has given me a simple but powerful conviction:

> ***"Network reliability is not just a technical outcome. It is a leadership responsibility."***

Over the years, I have learned that sustainable network performance comes from aligning people, technology, processes, infrastructure and partners towards a common goal — exceptional customer experience.

A Real-World Story

From a Network Alarm to a Leadership Decision

It was a busy weekend when a major data slowdown was reported across multiple sites in Ibadan, Initial alarms indicated RAN congestion. The expectation was a quick sector optimization, but I asked a simple question: "Are we solving the symptom or the real problem?"

We took a wider view.

- RAN locked stable, but traffic could not move efficiently.
- Further investigation showed packet loss in the transport layer.
- Root cause: a failed microwave link affecting multiple aggregation points.
- The issue required coordination across Transmission, Field teams, Vendors, and NOC.
- Service was restored, followed by full RCA, route redundancy and preventive measures.

Key lesson:

"True operational excellence comes from looking beyond the obvious, asking the right questions, and bringing the right people together."

The Bigger Picture

A Connected Ecosystem

Customer Experience	Happy customers drive business growth.
RAN (2G/3G/4G/5G)	Coverage, capacity and quality.
Transport / Fiber	Moves the traffic reliably.
Core / Data Centre	Processes and manages the services.
Power / Infrastructure	Keeps the network alive.

When one layer is weak, the entire customer experience is at risk. That's why I lead with an end-to-end view.

My Leadership Approach

From Insight to Impact

A structured approach I use to tackle complex operational challenges.

SEE — Understand the real issue
FRAME — Analyse options
ALIGN — Bring the right people together
EXECUTE — Implement and restore service
LEARN — Capture lessons and prevent recurrence

The Operational Excellence Equation

People (Skilled, accountable and motivated) x **Process** (Clear, efficient and disciplined) x **Technology** (Fit-for-purpose and scalable) x **Resilience** (Redundancy and failover) x **Governance** (Visibility, KPIs and accountability)

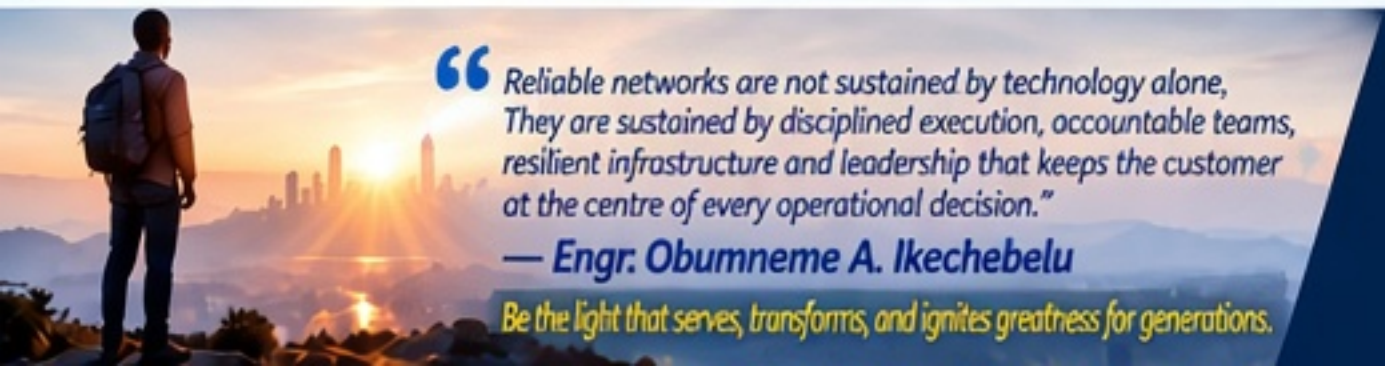

RELIABLE SERVICE

Consistent Performance | Satisfied Customers | Business Growth

> *"Remove or weaken any one element, and the entire outcome is affected. Operational excellence is a team sport."*

Measurable Results

- **99.99%** Network Availability (Target)
- **Millions** Customers Supported Across Multi-Regions
- **24/7** Operations & Service Assurance
- **Faster** Incident Detection and Resolution
- **Reduced** Repeat Incidents Through RCA & Preventive Actions
- **Improved** Customer Experience and Service Performance

> *Reliable networks are not sustained by technology alone,*
> *They are sustained by disciplined execution, accountable teams, resilient infrastructure and leadership that keeps the customer at the centre of every operational decision."*

Be the light that serves, transforms, and ignites greatness for generations.

Looking Ahead

I remain committed to leveraging my experience to drive reliable, resilient and future-ready networks that create value for customers, organizations and communities.
